## Two Stair Light Controller Cascade Connection

The downstairs light controller connects Up direction PIR sensor and daylight sensor.  
The upstairs light controller connects Down direction PIR sensor and daylight sensor.  
Two stair light controllers connect cascade UP/DW line.  
After the sensing light control process is finished,  
wait for the delay time, the light will automatically turn off.

Note: the push switch function must be set as cascade input.

## Two Push Switch as Up/Down Induction Signal Input Connection

The under push switch connect cascade UP port of the stair light controller.  
The up push switch connect cascade DW port of the stair light controller.  
The push switch operation will ignore daylight sensor threshold setting.

When the push switch function be set as cascade input,  
the push operation will start induction light control process.

When the push switch function be set as All-on input,  
the push operation will turn on all light, and the light will turn off after the delay time automatically.

When the light is on, press the push switch to turn off the light immediately.  
If it is in the delay light-off timing state, it will automatically cancel the delay light-off timing  
and turn off the light immediately.

Push switch and laser sensing can be used at the same time, after the laser sensing turns on the light,  
the light can be turned off through the push switch.

## Installation of PIR Sensor

Size of detector:

PIR sensor detection scope ( $\pm 10^\circ$  Error):

Notice for installation of PIR sensor

1. Recommended for wall mounting.
2. If the sensor is exposed to direct sunlight, interference signal will be introduced.
3. The sensor should be installed in a dry environment and keep away from windows, air conditioner and fans.
4. Make sure that the sensor stays away from heat source, such as countertops, kitchen appliances which generate hot steam, walls and windows in direct sunlight, air conditioner, heating, refrigerators, stoves and so on.
5. We recommended the wall-mounted installation height is 1-1.5 meters and the ceiling mounting height is no more than 3 meters.
6. There should not be shelter (screen, furniture, large bonsai) within the range of detection.

★ For wall mounting and ceiling mounting,  
note that the sensing holes are perpendicular to the direction of human movement.
